- Proficient in coding languages such as HTML, CSS, JavaScript, ReactJS.
- Strong problem-solving and analytical skills
- Ability to work independently and remotely, with excellent time management skills.
- Excellent written and verbal communication skills
- Familiarity with frameworks including Bootstrap, TailwindCSS, Next.js.
- Ability to fetch APIs from the backend
- Attention to detail and ability to follow instructions meticulously.
- Knowledge of version control systems (e.g., Git).
- Experience in building delightful user interfaces.

### EXPERIENCE

- 8 Months of experience in being a frontend web developer, having built 5-10 projects which have been pushed to GitHub and hosted in Vercel

### PROJECTS OVERVIEW

- **Jazzy Burgers:** Jazzy Burgers is a cutting-edge online platform designed to revolutionize the way people order and enjoy burgers. As a frontend web developer, my role will be to craft a visually stunning, highly responsive, and user-centric website that enhances the overall customer experience. As a frontend web developer, my role will be pivotal in creating a seamless, visually appealing, and user-friendly website that enhances the customer journey from browsing to checkout. The goal was to develop a site that not only meets the needs of burger enthusiasts but also sets a new standard in online food ordering experiences. I also performed the task of retrieving APIs from the backend. The site was built fully on ReactJS.
- **Personal Task Manager:** As part of my ongoing development as a front-end web developer, I have created a mini site designed to manage tasks efficiently and intuitively. Although the backend functionality is not yet complete, the project showcases my skills in front-end development, user interface design, and user experience optimization. This project serves as a testament to my ability to create aesthetically pleasing, functional, and responsive web applications using modern front-end technologies.
